# The Algorithm Design Canvas

HIRED IN TECH

## Constraints 🔗

1. (a: int[], targetb: int) -> (a: int,b: int)
2. return only one solution
3. don't return same element twice (a != b)

## Ideas 💡

| Brute Force | O(N^2) |
| | O(1) |
| Hash Table but look before you store | O(N) |
| | O(N) |

## Test Cases ✔

## Code </>
